

Aayush Chouhan

Student

Professional Summary

I've always been interested in technology and computers, particularly cyber security, and I also enjoy mobile gaming. As a result, in my tenth grade, I began game penetration testing, and in my eleventh year, I took Compute Science as an optional. In addition, in 11th grade, I began freelancing to enhance other people's games by uncovering bugs, exploits, and faults in them. During that time, I became interested in programming languages and began to study basic fundamentals of the major mainstream languages. Later, towards the end of my twelfth grade, I began using Android Studio and I fell in love with it. I have learnt many things from Android Studio while creating Apps that are not only programming related but also life related such as patience, critical thinking, and so on.

And with all of my programming and penetration testing experiences, I chose to become a cyber security specialist and pursue a degree in B.tech Cyber Security. As a result, I am pursuing it at the Oriental College of Technology in Bhopal.

Work History

Freelance Game Penetration Tester

Quickly learnt new skills as games routinely enhance their security and used those skills for boosting efficiency and productivity in order to uncover new problems in my customers' games.

Participating in continuous development by making recommendations and participating in problem-solving activities to help my partners.

Before resolving complaints, I actively listened to the client's requirements and confirmed complete knowledge.

During my professional experience, I was continuously learning from my coworkers.
